CHADSWORTH 1.800.COLUMNS PolyStone™ Balustrade Series was chosen one of the best in *The 2005 Qualified Remodeler Buyers Guide*.

Chadsworth's 1.800.COLUMNS PolyStone Balustrade Series is constructed of reinforced polyester resin, fiberglass and marble dust. This material provides a balustrade that has the structural strength of stone, but not the added weight. The balustrades will not rot; crack, or split, and they are impervious to insects as well as extreme weather conditions.

The PolyStone™ Balustrade Series is engineered with attention to detail, for a finished product that will last a lifetime. Chadsworth's 1.800.COLUMNS PolyStone™ Balustrade Series exceeded all required BOCA testing for structural performance.

“Qualified Remodeler has been serving professional remodeling contractors for 30 years,” says Editor In Chief Patrick O’Toole, “The magazine's long success is based on the foundation of asking what business information our readers need and then providing it in a practical, easy-to-understand format. The magazine's articles help to educate and stimulate creative thinking and work to assist remodelers in solving business issues critical to their success.”

Qualified Remodeler knows that Chadsworth combines classic design from the past with state-of-the-art materials of today to produce extraordinarily detailed architectural products that will enhance the value of any structure, adding strength and durability. And Chadsworth's 1.800.COLUMNS PolyStone™ Balustrade Series continues the tradition.
