Chadsworth's 1.800.COLUMNS Authentic Replication Columns and Pilasters were featured in The Toolbox in the May Issue of *Walls & Ceilings Magazine*.

The Authentic Replications Columns are from Chadsworth's *Premier Custom Collection*. The company replicates 'classical specifications' by integrating the original formulas with computerized technology to achieve a precisely proportioned finished product. The columns are made from the finest wood available (Western Red Cedar, Clear Heart Redwood, mahogany, teak), with plain or fluted shafts. They are available in the following sizes: from 8"x 8' up to 20"x 22'. The load-bearing columns may be used for interior or exterior projects.

"Columns add classical interest to any design," says Jeffrey L. Davis, the Founder and Principle Designer of Chadsworth's 1.800.COLUMNS, and accent the crown molding in any room."
