Walls & Ceilings Magazine chose Chadsworth's 1.800.COLUMNS Authentic Replication Plain Roman Doric Columns and Pilasters with Roman Doric Bases as one of the 20 most requested products, along with the company's literature for 2004.

The columns and pilasters add weight without mass, creating a dramatic flow from one space into another, as well as adding architectural interest.

Chadsworth's Authentic Replication Columns are made from the finest wood available (Western Red Cedar, Clear Heart Redwood, mahogany, teak), with plain or fluted shafts. Columns are available in the following sizes: from 8"x 8' up to 20"x 22'. The load-bearing columns may be used for interior or exterior projects.

The company meticulously replicates classical specifications by using computerized technology to achieve a precisely proportioned finished product.

"We are seeing more interest in traditional home design," says Walls & Ceilings Managing Editor, John Wyatt, and we rely on Chadsworth to keep us abreast of what they see as market trends."
